DETAILED ACTION

Rejection of the Disclosure

35 U.S.C. 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejection

35 U.S.C. § 102

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by a printed publication based on the Plant breeders Right document 97-999.

35 U.S.C. 102

The claimed Strawberry variety 'Evangeline' is described in Breeder's Right grant number 0617 granted in Canada on May 3, 1999. The publication of the grant took place on August 10, 1999 and the denomination was published on June 30, 1998. The application filing date of March 13, 1997 was published on April 30, 1997 more than one year prior to the filing date of the instant application.

The published application, grant and denomination are each "printed publications" under 35 U.S.C. 102 because they are accessible to persons concerned with the art to which the document relates. See *In re Wyer*, 655 F.2d 221, 226, 210 USPQ 790, 794 (CCPA 1981). See also MPEP § 2128.

For example, UPOV publishes the application number, grant number, date of publication, species of plant, and variety denomination for PBR certificates, and copies of the each grant are

obtainable in Canada. All documents relating to the application are open for public inspection. Thus information regarding the claimed variety, in the form of the publications noted above, was readily available to interested persons of ordinary skill in the art.

A printed publication can serve as a statutory bar under 35 U.S.C. 102(b) if the reference, combined with knowledge in the prior art, would enable one of ordinary skill in the art to reproduce the claimed plant. *In re LeGrice*, 301 F.2d 929, 133 USPQ 365 (CCPA 1962). If one skilled in the art could reproduce the plant from a publicly available source, then a publication describing the plant would have an enabling disclosure. See *Ex parte Thomson*, 24 USPQ 2d 1618, 1620, (Bd. Pat. App. & Inter. 1992) (“The issue is not whether the [claimed] cultivar Siokra was on public use or sale in the United States but, rather, whether Siokra seeds were available to a skilled artisan anywhere in the world such that he/she could attain them and make/reproduce the Siokra cultivar disclosed in the cited publications.”).

While the publications cited above disclosed the claimed plant variety, the question remained as to whether the references are enabling. If the plant was publicly available, then the published application, combined with knowledge in the prior art, would enable one of ordinary skill in the art to reproduce the claimed plant. Based on applicant’s response the instant plant was in fact publicly available is limited more than one year prior to the U.S. filing.

More specifically, applicant admits the instant plant was first available to the public in Canada after May 3, 1999. Although applicant insists said rejection is wholly inappropriate, applicant’s response is non-persuasive as the argument presented fails to prove that the instant

Art Unit: 1661

plant had not been described in a printed publication in the U.S. or other country by another based on the assertion that the invention was discovered well before the publication date. The issue instead is whether the availability of the plant coupled with the publication were sufficient to put the plant in the public domain more than one year prior to filing in the U.S. Based on applicant's admission such availability did in fact occur more than one year prior to the U.S. filing. While applicant asserts such availability took place only in Canada, 35 USC 102(b) still applies as the instant plant had been both published and available and therefore enabled. There is no geographic component to enablement. A reference is enabling if it allows anyone, anywhere, to make and use the invention.
